

## It's about time

### The Lintec / DHL Priority Advantage Desk

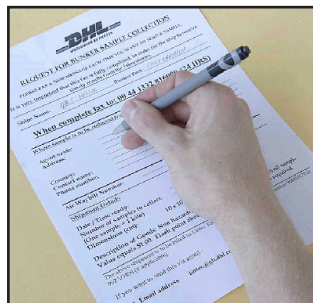

Efficient laboratory working practices mean that Lintec is able to issue results of analysis on the same day that the sample arrives at the laboratory.

Consequently, the critical factor has become the time taken to deliver the sample to the laboratory.

The Lintec Priority Advantage Desk (PAD), the cost of which is included in the price paid for analysis, minimises the time taken to courier the sample from the bunker location to the laboratory.

On taking the sample the ship staff simply fill out a bunker sample collection form (provided with every sample kit) then fax (or E-Mail) this form to Lintec's courier partner, DHL.

This places the sample in the care of the Priority Advantage Desk (PAD) and allows the ship's crew to concentrate on other activities.

On receipt of the bunker sample collection form by the Priority Advantage Desk (PAD) a local courier will be contacted and arrangements made to collect the sample.

The location of the sample is then monitored, ensuring a swift delivery to the laboratory.

### There are four reasons why Lintec strongly recommends the use of the Priority Advantage Desk (PAD) to our clients :-

- (i) It minimises the time taken to courier the sample from the bunkering location to the laboratory.
- (ii) It takes the burden from the ship's crew and passes it on to Lintec / DHL.
- (iii) It is included in the price for analysis.
- (iv) It differentiates Lintec from other service providers.

Increased awareness has seen more clients taking advantage of the Lintec / DHL Priority Advantage Desk (PAD).

If you're not taking advantage of the PAD, then 'it's about time' you did.
