

Lintec Launches Online Fuel Analysis Service

International marine fuels testing and analysis company Lintec has launched Marline, an Internet-based fuel analysis service that will provide clients with tailor-made current and historical fuel analysis data - dramatically increasing the waiting time for results.

Marlin, which is the most advanced Internet-based testing service currently available, was developed over the course of one year.

A basic demonstration of the service can be viewed at www.lintec-group.com/maclinets.htm, using "mch" as the client code, user name and password.
